## Part # 400200 BLINQ PEDIATRIC VISION SCANNER

- Blinq (pediatric vision scanner) is the first instrument designed for vision screening programs that detect micro-strabismus and amblyopia.
- Using a novel new technology, Blinq conducts a 2-second Neural Performance Scan of the fovea to accurately detect binocularity associated with as little as 1-degree misalignment.
- Using proprietary retinal polarization scanning to measure bilateral Fixation via fibers of the fovea, NPS precisely measures retinal nerve fiber patterns, instantly determining if fault Fixation is present.
- NPS is cleared by the FDA for the screening of micro-strabismus and amblyopia (lazy eye).
