### # 2305B 4 Meters Tumbling “E” Acuity Sight Test – Chart 3

- Tumbling E charts, also referred to as Illiterate E tests, are useful for testing patients that are illiterate or mute.
- Patients simply have to sign or gesture which direction they see the E facing.
- Tumbling E charts are considered highly reliable and are second only to Landolt C tests.
- Both tests use only one optotype positioned differently and are useful for testing several types of patients.
