## # 585600 Vectograph Viewers – VAC Single

- These VAC Vectograph Viewers greatly simplify vision therapy by holding vectographs at the proper angle. The vectographic panels can be slid to the 'breaking point' and back to the 'recovery point'. These vectograph viewers support the full extension of the panels to their maximum base-in and base-out capabilities. The white background behind the vectograph supports base-out vergence work (convergence) and can be removed to reveal a clear background. This permits the use of the vectographs for fusional divergence work which requires that the patient view beyond the plane of the vectograph.
- Double vectograph viewing stand.
- 585600 and 587800 are designed to hold vectographs from Vision Assessment Corp Only.
- Vectographs are not included with the viewers.
