## # 988720 Hand-Held EpiGlare Glare Tester

The Hand-Held EpiGlare easily tests for glare sensitivity using long-lasting LED lights. While many other methods of glare testers suffer from inconsistent light intensity and angle, the EpiGlare offers a standardized, repeatable approach to measuring and documenting glare disability with the best-corrected vision.

The EpiGlare line offers several advantages over existing solutions including:

- Integration with most manual phoropters so tests can be performed with the best-corrected vision
- Tests night time glare, a key complaint of cataract patients
- 9+ hours of battery life per charge and a spare battery in every kit eliminates the need to use valuable handles and charging wells
- Smart power level indicator ensures every test is at the right power level

The EpiGlare comes attached with a handle and recharging station.
