## # SATP-201    Senaptec Synchrony Pro

Anticipation timing is an essential skill you rely on every day. Shaking hands or giving a high five requires moving muscles at just the right time. The simple act of catching a ball requires your eyes to track motion, your brain to judge distance, speed, and trajectory, and your muscles to move in time with the ball's arrival. The Senaptec Synchrony provides an effective and fun solution engineered to sharpen and refine these judgement calls – both in sport and in everyday life.

Why go Pro? The Synchrony Pro travels beyond the capabilities of the standard Synchrony, with the Proximity Sensor serving as the golden ticket to a personalized experience. The Proximity Sensor activates based on sound, motion, or breaking a light beam, delivering excellent accuracy and removing training limitations. To illustrate, a baseball player could activate the

Proximity Sensor when swinging a bat over the device. The result? A breakthrough experience that allows the user to train their anticipatory response while performing the motion in their competition setting.

This brand-new patented technology is the first of its kind. Designed to train eye-hand timing, responsiveness, and accurate judgment of moving objects, the Senaptec Synchrony uses LED lights to simulate motion. Each module is customizable to create individual programming. After each session, a detailed performance scorecard is generated. Instant results and access to the Senaptec cloud-based demographic database provide on-the-spot, comparative feedback.
