VTP-250 VTP Edition Cheiroscope™ Trainer

- VTP Edition Cheiroscope™ Trainer was designed to provide the ideal weight needed to eliminate movement while tracing. Allows for use by right or left handed patients, as well as right or left eye viewing. The device features tilt control, which makes it easier for a patient to stay seated and trace while looking through the lenses. This can be adjusted using the black rubber knobs on the ends of the base. The device also has a mm scale on the front and back side of the base to indicate demand, as well as a smooth surface for tracing or drawing.
- The instrument is made of rigid plastic with non-skid rubber feet. It also features a milled, clear acrylic viewer with +5.00 accommodation compensating lenses. The clear acrylic viewer helps to reduce visual distraction when using the device. The lenses are held in place by spring loaded threading. They can be easily removed without the use of tools for cleaning or replacement.
- VTP Edition Cheiroscope™ Trainer includes 12 pairs (24 cards total) of special fusion cards with suppression checks and 36 tracing shapes (BC405CD18).
