enhancing vision ~ enriching life

VTP-405+ VTP Edition Mirror Stereoscope

VTP Edition Mirror Stereoscope features magnets that are flush on the backside of the device for seamless attachment to the VTP Edition Easel. The Mirror Stereoscope is made of rigid ABS plastic and has hidden rubber hinges. The VTP Edition Easel is made of rigid ABS plastic as well and is height adjustable.

The stereoscope is used for in-office and home vision training during intensive therapy & for retention therapy. Doctors now realize that it is as important to retain the new visual abilities as it was to train them initially. Many successful vision training patients have been lost to follow-up because they thought they were cured. It is for this reason that Bernell is developing vision training equipment for the patient to buy from their optometrist and take home during or after their training. Some primary care optometrist are

using these tools for home training when they do not do in-office VT themselves & don't have a doctor for a referral.

This is a Wheatstone-type stereoscope; a true space fusion trainer with a 40PD Base-In to 50PD Base-Out range. By changing the configuration, the instrument serves as a single oblique mirror stereoscope or cheiroscope. Trains for simultaneous vision, elimination of suppression, ARC, fusion, stereopsis, cheirotoscopic drawing skill & development of fusional convergence/divergence reserves. Contains front surface mirrors for less distortion of the image or angles.

VTP Edition Training Kit Includes:

- VTP Edition Mirror Stereoscope
- VTP Edition Adjustable Easel
- Ruler
- Two Red Pointers
- 12 Pair of Fusion Cards
- 18 Drawing Targets
- Manual

Adjustable Easel: The new adjustable easel is designed to allow the user to easily adjust the angle of the easel to fit the height and comfort setting of the patient. The easel is especially useful when using the mirror stereoscope for cheirotoscopic training. This easel features two magnets for seamless attachment of VTP Edition Mirror Stereoscope. Included on the easel is a guide for easy monitoring of the prismatic demand of the patient when training.

Items in kit may be purchased separately.
