## # WSCH+ Wolff Standup Cheiroscope

### Wolff Standup Cheiroscope

- This instrument was designed by Bruce Wolff, OD. As a practical instrument for performance testing and visual therapy procedures. The simple design allows for the unit to be placed on a desktop and raised and lowered to adjust to the standing height of the patient. The low-maintenance design also assures years of affordable use.
- Easy adjustment makes it practical to administer cheirosopic testing to patients from age 4 through adult. Testing provides information about eye-hand coordination, bi-manual symmetry, and qualities of binocularity such as suppression and binocular stability. Hard copy results can be a valuable tool for understanding functional visual difficulties.
- An instruction manual prepared by the Behavioral Vision Project (BVP) provides a structured guide to a recommended testing sequence. The manual also includes discussions of observations available in testing, analysis and use of testing information, and therapy procedures utilizing the cheiroscope. An initial supply of 3 pads of testing forms (75/pad) and recording forms are included.
- Actual freight charged on this item.
- Height: 34.5"
- Weight: 50lbs
